

7.3L OVERBOOST KIT INSTALLATION

DO NOT TURN KNOB
 REGULATORS COME PRESET AT 20.5 PSI!

1. Locate the MAP sensor.

94-97 MAP sensors are located on the passenger side cowl. 99-03 MAP sensors are located on the AC/heater box on the passenger side of the engine compartment.

2. Remove the 1/4" rubber pressure line connecting MAP sensor to the intake plenum on the 94-97 or intake "Y" pipe on the 99-03. *

3. Install regulator with the arrow pointing to the MAP sensor.

4. Mount regulator where convenient with supplied bracket.*

DO NOT TURN KNOB

*You may use a MAP sensor mounting bolt on 99-03 models. If you have a "T" installed for a boost gauge, install the regulator between the MAP sensor and "T" fitting.

TECHNICIANS: If adjustments are needed, rotate knob in very small increments until desired boost pressure is reached. If check engine light is still present, and it is verified by a scan tool that MAP readings are out of range, turn the knob counter-clockwise to decrease the amount of boost seen by the MAP sensor.
